## MORTAR SPREADER

A Bold, NEW Mason's Tool!

The addition of an accessory stainless steel plate converts the 6 or 8 inch Vet-O-Vitz Mortar Spreader to full-bed joints for through-wall brickwork.

For the first time, full 6 and 8 inch through-wall unit bed joints can be spread with *one easy motion*, with no skips or misses! This eliminates the usual double-spreading and furrowing, and will contribute materially to savings in both material and clean-up costs.

## Bricks Or Blocks

The Vet-O-Vitz Mortar Spreader is versatile. It can place 1½" wide beads on block or full-bed joints on bricks. Bed-depth for either block or brick is adjustable for bed depths from ¾" to over an inch.

The first course can be started on the footers or wall.

The hopper is designed to cover some 20 to 30 feet of block wall with one filling. This will vary considerably with joint thickness on block walls, and will be less with full beds.

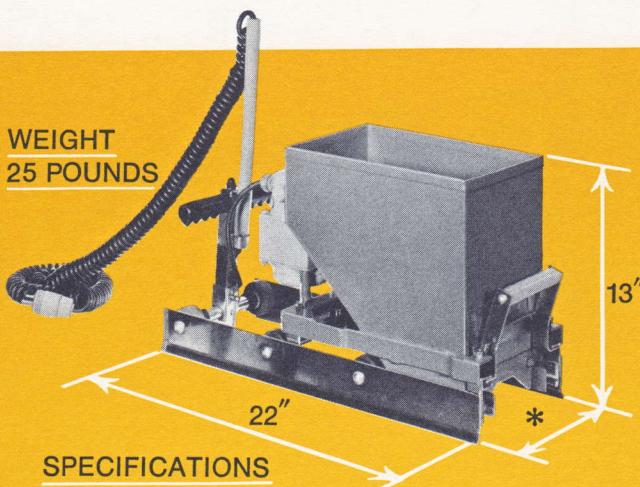

The Spreader is dream-easy to operate. Fill the hopper, press the button and pull along the wall. Six Nylon wheels make it practically glide along. Ninety-eight percent of its vibration is absorbed by Nylon grommets, and it can't shake the course underneath.

This new mason's aid is amazingly rugged and foolproof. The hopper is stainless steel, PVC-coated. All parts are either stainless, Nylon or rustproof material. It's designed for years of maintenance-free use.

Cleaning is easy. You don't have to take anything apart. Just push the wheels to one side, and use a high-pressure hose.

Vet-O-Vitz Mortar Spreaders are offered in sizes for 6, 8 and 12" walls. Optional accessories include full-bed gates for the 6" and 8" sizes, watertight extension cords, Y-sockets and cord masts, mortar scoops and brushes. See our price list.

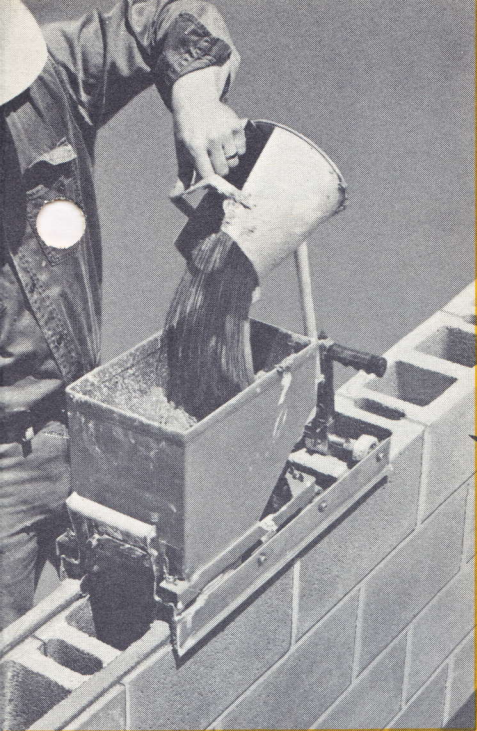

**WEIGHT**  
25 POUNDS

### SPECIFICATIONS

Power 120 vac, 7 amp. start, 4.2 amp. run.  
Has 25' heavy-duty coiled, grounded power cord.  
Vibrator motor sealed, permanently lubricated.  
All parts UL approved. Push-button control operable from either side. Hopper, stainless steel, PVC-coated. All parts are weatherproof. Guaranteed for six months. \*Furnished in 6, 8 and 12 inch sizes with full-bed gates offered for the 6 and 8 inch sizes. See price list.

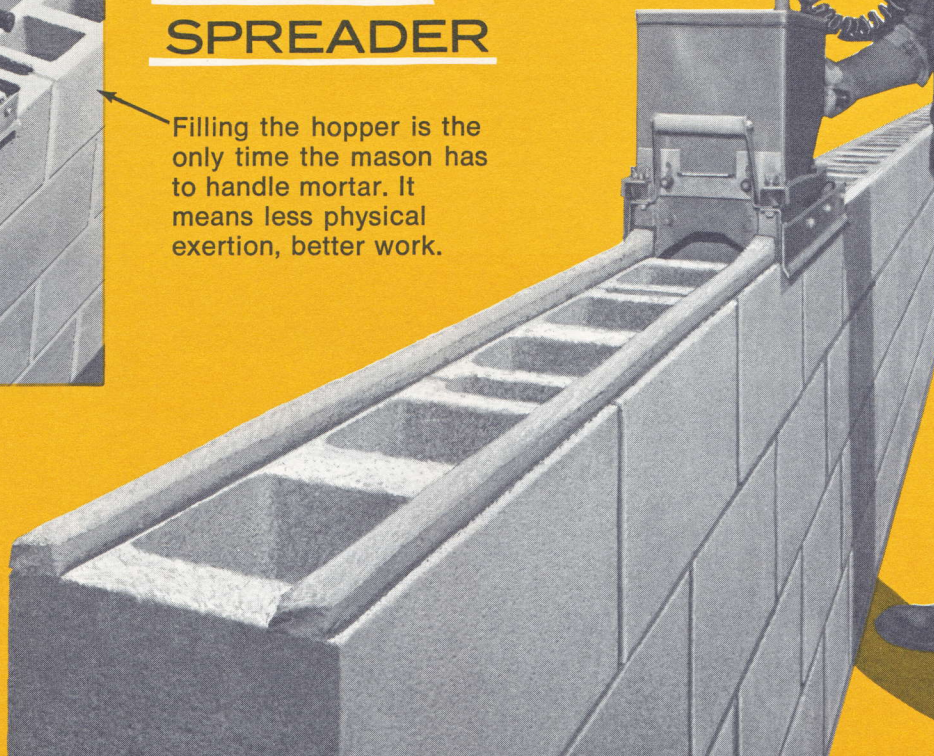

# Vet-O-Vitz

## MORTAR SPREADER

Filling the hopper is the only time the mason has to handle mortar. It means less physical exertion, better work.

## 45% Mortar Saving...

The Vet-O-Vitz Mortar Spreader is a bold, new mason's power tool that lays ribbons of mortar with such precision as to nearly halve mortar requirements! Material cost and handling cost is radically reduced.

Still further, there are virtually no droppings. This will slash clean-up time to a fraction of what has often been needed.

No more tap-tap of the mason's trowel! V-O-V mortar spreader beads are exceedingly uniform, precisely-positioned, and have no skips or voids.

And the Vet-O-Vitz Spreader is *fast!* The mason's productivity can be increased as much as 50 percent, with two masons producing the work formerly done by three or more.

Skill in use of the Spreader can be acquired in two or three hours. Masons like it because it lets them do a much better job with much less physical exertion. It has been accepted for use by the Bricklayers, Masons and Plasterers International Union of America.

The grand total of material and labor savings

effected by this new mason's tool may now make you competitive with precast and poured-in-place concrete. It makes it possible for you to bid on non-loadbearing partitions and even residential basement walls!

The high-strength mortars (M and S) that are difficult for masons don't faze the Spreader. Its vibrator accepts just any kind of mortar at consistencies from 750 to 4000 psi. Retempering is almost never needed.

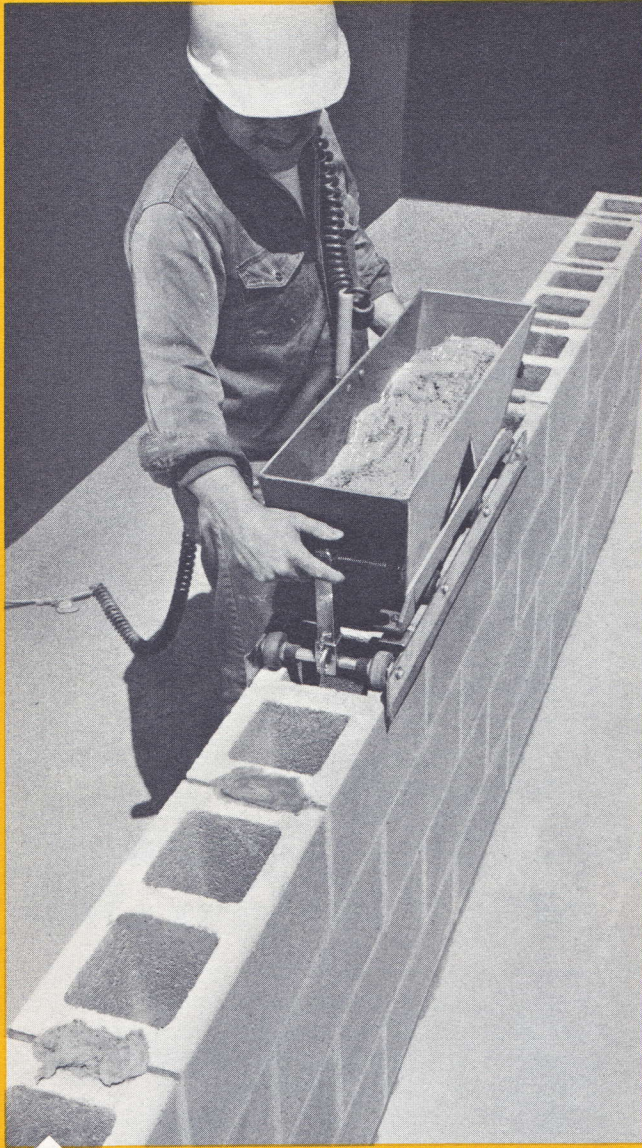

The vibrator is so smooth that the machine glides over the wall with absolutely no disturbance of the fresh mortar in the course below.

Clean-out holes in walls that are to be grouted are completely unnecessary. This is because this new mason's tool eliminates the usual dropping and overflow of mortar inside the blocks. This unheard-of interior cleanness results in stronger walls with reduced dead-weight.

The Vet-O-Vitz Mortar Spreader is offered in three sizes for 6, 8 and 12 inch wall widths and will work on any kind of block of these widths.

# Other Vet-O-Vitz Tools

**WALL GROUTER.** A companion tool to the Vet-O-Vitz Mortar Spreader, this machine fills the head-joints in concrete block walls. It fills two cavities simultaneously with just precisely the right amount of mortar. There is no waste, no clean-up. Like the spreader, it will handle just any kind of mortar, at any practical consistency. It is almost unbelievably *fast*. Savings in labor and material are massive.

**FLOOR GROUTER.** Another Vet-O-Vitz power tool for the mason. Utilizing the same high-speed principles as the Mortar Spreader, this machine fills joints in floor slabs with precisely the exact amount of mortar. It does a better job, *faster*, with the merest fraction of the labor formerly needed.

For full details on the floor and wall grouters drop a note to the address below.
